Understanding Benefits, Balances, Referrals, and Notes

BCBS AR · Case Manager Reference

Status

Select the Status field on a referral to see what it means. **Accepted By Provider** means the provider has confirmed — and that's also your green light to share their contact info with the member.

Provider

Select the provider's name for their contact card — Provider ID, company, name, email, phone, and location.

SHARING PROVIDER CONTACT INFO

The phone number is visible here regardless of status — but only share it with the member once the referral reaches Accepted By Provider.

Referral narrative

Free-text space for context a case manager has added — special instructions, background for the provider, that kind of thing. It's normal for this to come back empty; check it anyway, since you won't know until you look.

Balance & key dates

Above the encounter list: Allowed, Used, and Remaining hours for this specific referral — a different number than the benefit-level totals on the member's landing page. Below that, Key Dates tracks the referral's history: received, assigned, accepted, and (if applicable) declined.

Encounters

An encounter is the provider's record of what actually happened — time in, time out, total hours, and completed Service Tasks. Encounters only appear after a provider has actioned the referral, so a brand-new referral may not show one yet.

TASK CHECKLISTS VARY BY SERVICE

Virtual Companion encounters show a simpler task list. Post Discharge encounters show a fuller ADL/iADL checklist — eating, transferring, toileting, and more — since it covers broader day-to-day support.

Add a note

1. Select **Add**, then **Add Note**.
2. Choose a Note Type (Visit Scheduled, Member Outreach, Status Change, General, and more).
3. Type what happened, then select **Add Note** to save it.

NOTES DON'T ESCALATE ANYTHING

Adding a note does not alert The Helper Bees — it's just a record on the referral. If something needs attention, submit a Zendesk ticket instead.

Find notes, documents, and service questions

VIEW MENU OPTION	WHAT IT SHOWS
View Notes	Every note logged on the referral, in one table
View Documents	Any files a provider has attached (receipts, invoices)
View SDQ	The member's best phone number and quantity-allotted confirmation, entered when the referral was created

If a member's contact info on file ever looks off, View SDQ is the first place to check it.

The Initial IHS Assessment tile

Members also have a second benefit tile, **Initial IHS Assessment** — a separate one-point benefit with its own authorization and its own referral. It doesn't use any of the 20 post-discharge hours. Assessment visit documentation is optional — providers are prompted to upload it to the referral if applicable, but not every assessment will have any. To see what the provider recorded at the visit, open the assessment encounter and read its Service Tasks.

REMAINING 0.00 IS EXPECTED HERE

Once the assessment is completed, the tile shows Used 1.00 and Remaining 0.00. Nothing is wrong. The Helper Bees team creates the assessment referral and assigns the provider; you create your referrals from Post Discharge Support.
