

SCAN Case Manager Zendesk & Referral FAQ

Answers to common referral, authorization, and ticket-writing questions

1 Before calling or submitting a ticket

- Verify the member ID and search the correct SCAN record.
- Review current and prior referrals, including referral notes and authorization details.
- Confirm the benefit, service, provider, hours, visit limit, effective date, and current status.
- Check whether the referral is monthly or ongoing before treating an end-of-month date as a true termination.
- Search for an existing ticket or referral note about the same concern.
- Decide whether you need a status update, a specific correction, provider follow-up, or escalation.

2 Issue type breakdown for SCAN requests

Member Authorizations / Referral Questions

Use for:

- Referral status or missing referral questions
- Authorization missing, showing “Eligibility Failed,” or showing incorrect hours or visits
- Service, hours, visit-limit, or effective-date changes
- Ongoing or monthly referral questions
- Travel escort authorization or referral details
- Plan or benefit changes affecting referral creation or continuity

Example: “The member is eligible for ongoing Personal Care/Home Support, but the July authorization shows ‘Eligibility Failed.’ Please review and update the referral.”

Provider: Change Request / Report a Provider Issue

Use for:

- Provider declined or cannot accept the referral
- Provider does not accept the member's plan or cannot staff the service
- Provider has not contacted the member after accepting the referral
- Provider reassignment or re-staffing
- Request to avoid or change a specific provider, with the reason documented
- Travel escort provider coordination when the issue is provider-related

Example: “The assigned provider declined because it does not accept the member's plan. Please continue reassignment and note the decline.”

Cancel Service

Use when SCAN is requesting that an active service or referral be stopped. State the service, requested effective date, and whether the request is a full cancellation or a temporary pause.

Report System Issue / Outage

Use only when the problem appears to be a technical or access issue after the member and referral have been checked — for example, the referral cannot be found in the expected view, a status is not displayed, or the system shows inconsistent information. Include the exact search performed, the screen or status observed, whether other SCAN users are affected, and a screenshot when permitted.

Notify of an Emergent Referral

Use when timing could affect member safety, a scheduled appointment, or continuity of essential services. Explain why it is urgent and include the deadline and all appointment or service details.

Meals and OTC

Use for:

- Tracking an order or checking delivery status
- Reporting an issue with a delivery — wrong, damaged, missing, or never arrived

For meal and goods deliveries, select the drop-down arrow on the delivery in question to see its tracking details: **Delivery Status**, **Ship Date**, **Delivery Date**, **Merchant Order ID**, **Tracking Number**, **Carrier**, and a **Tracking URL**. Follow the Tracking URL for more detail if needed — carriers sometimes provide photo proof, which can help track down a missing package. It's also worth reviewing any upcoming scheduled shipments with the caller while you have them on the line. If the order hasn't arrived by the expected date, or arrived wrong, damaged, or incomplete, submit a Zendesk ticket describing exactly what's wrong and what was expected.

3 What to handle yourself vs. escalate

Handle it yourself

- **Standard referral submission** — submitted directly through Benefits Hub, no ticket needed.
- **Companion care preferred-provider requests** — submit the referral first, then immediately send a Zendesk ticket asking for reassignment to the preferred provider. If another provider is auto-assigned before the ticket is reviewed, that's expected — our team hasn't looked at the referral yet, and the provider will be changed once the ticket is entered.
- **Transportation referrals** — must be created at least 48 hours in advance. For urgent transportation needs, direct the member to other applicable benefits instead. Enter the referral first in all cases — no Zendesk ticket is needed for a standard transportation request.

Escalate when the issue involves

- A **system defect or configuration problem** — missing wallets, wrong balances, benefit rollover problems, eligibility failures, or severe portal slowness.
- A **referral that was auto-assigned incorrectly**, needs a preferred provider, or has lag in staffing or provider assignment.
- **Urgent transportation breakdowns** — especially after-hours ride issues or inability to secure an in-network ride. Escalate through the transportation hotline, or contact the contact center after hours for Uber Rides-related issues only.
- **Financial exceptions** — backdated rent, stop payments, refunds, and duplicate deductions.

4 Referral status quick reference

The five statuses case managers ask about most — see the full lifecycle in the Understanding Benefits, Balances, Referrals, and Notes job aid.

STATUS	WHAT IT MEANS
New	Referral has been created and is awaiting approval.
Assigned to Provider	A provider was found in the service area and alerted (they have 3 days to respond).
Accepted by Provider	The provider has accepted — contact info can be shared with the member.
Unable to Contact	The provider couldn't reach the member after 3 attempts.
Completed	All rate types have been invoiced and billed for the service.

A provider's phone number is visible regardless of status, but should only be shared with the member once the status reaches Accepted by Provider.

5 Frequently asked questions

1. When should I call for a status update instead of submitting a ticket?

Review the referral and notes first. Submit a ticket when a specific action or correction is needed, such as updating an authorization, contacting a provider, reassigning a referral, or investigating a missing referral.

2. What should I review before asking for a referral update?

Review the current status, referral notes, assigned provider, date received, date assigned, and any prior outreach or provider response. This helps distinguish a normal pending step from a true delay.

3. A referral shows an end-of-month date. Does that mean services ended?

Not necessarily. Check the referral narrative and notes for monthly or ongoing authorization language and confirm whether the next segment has been created or is expected.

4. What does “Eligibility Failed” usually require me to provide?

State that the member is eligible, identify the affected month and service, and describe what the portal displays. Include the expected authorization — hours, visits, service type, and effective date — so the team can compare the record and correct or regenerate the referral when appropriate.

5. How should I request an authorization change?

State the current authorization if known, the exact requested authorization, effective date, month or date range, service type, provider, and whether the change is ongoing. Avoid vague requests such as “please fix the auth.” Example: “Please update the August authorization to 4-hour Personal Care/Home Support visits, maximum 10 visits, effective August 1, and assign it to the current provider.”

6. What if the authorization is only partially reflected in the portal?

Compare the plan's expected hours and visits with the authorization and referral narrative. Describe exactly what is missing or different and include the applicable effective dates. A clear comparison is more useful than a screenshot alone.

7. When should I report a provider issue?

Use the provider issue type when a provider declines, cannot staff the referral, does not accept the plan, has not contacted the member after acceptance, or needs to be changed or reassigned. Include the current provider, reason for the issue, requested next step, and any service deadline.

8. What information is needed for a travel escort request?

Include the appointment date and time, member pick-up time, caregiver arrival time, destination and address, type of appointment, destination phone number when available, whether transportation has been contacted, and the provider to notify. Submit as early as possible; do not label a request urgent without stating the actual deadline.

9. What if the plan recently changed?

Tell the team which plan or benefit changed, the effective date, the prior and expected program or service, and whether services are currently being delivered. A plan change can affect the authorization or prevent the expected referral from appearing, so the request should focus on continuity and the exact missing correction.

10. What information should every ticket include?

- Member name and member ID
- Referral ID, if available
- Benefit and service type
- Current status or portal message
- Exact requested action
- Hours, visits, provider, and effective date when relevant
- Appointment details and deadline for time-sensitive requests
- Troubleshooting already completed
- Related ticket number, if one exists

11. Should I submit separate tickets for every month or every issue?

No. Check for an existing ticket first. Keep related months or related corrections together when they concern the same member and authorization, while clearly listing each requested date range and change.

12. What should I avoid putting in a ticket?

Avoid vague requests, duplicate submissions, unsupported urgency, and unnecessary member information. Do not assume a referral expired based only on the displayed month-end date; first review the referral narrative and notes.

13. What is the best way to describe the desired resolution?

Use one sentence that states the action needed. For example: "Please update the July and August LTSS referrals to match the attached authorization and notify the assigned provider."

14. I submitted a referral in error, or need to replace it with a new one — what should I do?

Submit a Zendesk request for assistance. Case managers cannot edit a referral directly once it has been submitted.

15. The member appears ineligible, but the system still shows them as eligible — what should I do?

Submit a Zendesk ticket describing the discrepancy — include the member ID, the eligibility status you were told or observed elsewhere, and what the portal currently displays — so the team can verify and correct the record.

16. How do I know whether a referral was accepted, by whom, and what happens if staffing is delayed or the wrong provider is assigned?

The referral status is listed under each referral, along with contact information for the provider fulfilling the service once one is assigned. For staffing issues, check the referral notes first — if the team hasn't posted an update on the provider, submit a Zendesk ticket.

17. How do I track an order or get a delivery status?

For meal and goods deliveries, select the drop-down arrow on the delivery in question — this opens tracking details including Delivery Status, Ship Date, Delivery Date, Merchant Order ID, Tracking Number, Carrier, and a Tracking URL. Follow the Tracking URL for more detail when needed; carriers sometimes provide photo proof, which can help track down a missing package. If you need more than what's shown, submit a Zendesk ticket.

18. The page I'm seeing doesn't match what was shown in training — what should I do?

Continue in Benefits Hub using the fields currently on your screen. Portal screens can be updated after training materials are recorded, so the live site is always the source of truth.

19. The member needs services at a different address than what's on file - what should I do?

Select (change service address) when creating the referral to set a different location for just that referral - the member's address on file won't change. Once the referral is checked out, this address can't be edited in the system. To request a change afterward, submit a Zendesk ticket with the referral number and correct address; an update isn't guaranteed and depends on the referral's status.

Subject	<i>[Member ID] – [specific request] – [service/month]</i>
Member	<i>[Name and ID]</i>
Referral	<i>[Referral ID, if available]</i>
Service/benefit	<i>[Service and benefit]</i>
Current status or issue	<i>[What the portal or referral shows]</i>
Review completed	<i>[Searches, notes, authorization, provider status, prior ticket]</i>
Requested action	<i>[One clear correction, follow-up, or escalation]</i>
Deadline	<i>[Appointment or service date, if applicable]</i>

Key takeaway

Most SCAN contacts can be made clearer by separating a status question from an action request. Review the referral first, state the exact mismatch or needed action, and include the dates, service, authorization, provider, and deadline that allow the request to be resolved without avoidable follow-up.
