

Adding a Referral

Quick reference for creating a new referral

1 Select a benefit

Select the benefit tile you want to create a referral for.

2 Find your service

Choose a category, then search for the specific service you need.

3 Set your quantity and add to cart

Enter your quantity, then select Add to Cart.

4 Review and submit your referral

Select the cart icon, then the member's name, to review everything before checkout.

Verify the Service Address before you check out

This is where the referral will route to — it determines which provider services that zip code. **An incorrect address doesn't just get corrected later:** it requires a Zendesk ticket to close the referral, and you'll have to create an entirely new one from scratch. Double-check this every single time, before you confirm.

When you're ready, select Checkout, then Confirm to submit.

Heads up: Checkout submits every item in the cart at once — there's no way to submit just one item at a time. Make sure everything listed is still needed before you confirm.

Key takeaway

Review and checkout happen on the same screen — select the cart to review, **verify the service address**, then select Checkout followed by Confirm. There's no separate screen in between, and no way to fix an incorrect address after the fact without closing and recreating the referral.
