Quick Tips to Check Before Submitting a Ticket

Quick reference for troubleshooting before you escalate: Aetna case managers

1 Verify and search

- Confirm the member's identity: name, address, and date of birth.
- Confirm the **benefit** first: Personal Care, Post-Discharge, Recovery at Home, or Companion Care.
- Check all referrals, not just the first result.

2 Read before you escalate

- Read the referral narrative and notes, including the authorization details, provider updates, or the next step.
- Compare the requested service, hours, visit limit, effective date, and provider against the current authorization.

3 Give it time

- If an authorization was just created or updated, allow at least 24 hours before treating it as a system issue.

4 If you still need to escalate

- Choose the issue type based on the **action needed**, not just the topic mentioned. That is what routes it to the right team.
- Every field except Attachments is required. If a member-specific field does not apply, enter **N/A**.
- Include: member name and ID, benefit and service type, current info vs. requested change, and the effective or appointment date.
- Add provider or agency information when relevant, plus what troubleshooting you have already done and the outcome.
- Attach a screenshot or supporting documentation when relevant, and describe the requested resolution clearly.

5 Quick issue-type routing

Match the action needed, not just the topic:

If it's about…	Select this issue type
Referral, service, or order questions	I have a question about my order/service/referral
Provider or agency issues	Provider: change request/report a provider issue
Trouble accessing your account	I need help logging in
Requesting new Benefits Hub user access, or removing a user	Account creation/deletion
System behavior or outages	Report system issue/outage

READY TO SUBMIT?

In Benefits Hub, select the **person icon** in the top right, then **Submit a ticket**. You can also open the form directly: **aetna-thb.zendesk.com/hc/en-us/requests/new**
