

Signing In to Benefits Hub

Quick reference for accessing your account via SCAN's single sign-on

1 How access gets set up

Your Benefits Hub access is set up behind the scenes — SCAN and The Helper Bees coordinate to create your account and add you to the right access group. Once that's approved, SCAN sends you a personal SSO sign-in URL directly. There's no separate emailed sign-in link or account setup step on our end.

2 Click through SCAN's SSO

Click your SSO link. Since you're already signed into your SCAN session, it takes you straight into Benefits Hub — there's no separate sign-in page, username, or password to enter.

<https://auth.myhomealign.com/Auth/Login/ha-prod-scan>

This is SCAN's actual SSO sign-in URL — not a placeholder.

3 No credentials, no verification code

Because SCAN uses single sign-on, there's no login form, no separate emailed verification code, and nothing to type in — SSO confirms your identity automatically as part of the redirect. You'll land directly on your home screen, ready to search for members and view benefits.

4 Trouble signing in?

- **Account not showing up, or you're not redirected in automatically?** Check with your SCAN supervisor or admin first to confirm your name and email were sent to The Helper Bees, your account has been created, and you've been added to the right access group — all three need to be done before your SSO link will work.
- **Getting prompted for a password unexpectedly?** This usually means the sign-in page was bookmarked too early, before SSO finished confirming your identity. Go back to the original SSO link SCAN sent you, let it sign you in fully, and only bookmark the page after that.

- **Account is set up but you still can't get in?** Reach out to your organization's SSO or IT support — sign-in issues are handled outside Benefits Hub for SSO accounts.

Key takeaway

Unlike partners that use an emailed sign-in link, SCAN case managers sign in entirely through SSO — there's no login form, no password, and no verification code on Benefits Hub itself.

Account, access-group, and credential issues are all handled through your SCAN supervisor or your organization's SSO/IT support.
