

Quick Tips to Check Before Submitting a Ticket

Quick reference for troubleshooting before you escalate

1 Verify and search

- Confirm the member's identity — name, address, and date of birth.
- Confirm the benefit type and program first. Home Modification and In-Home Support/LTSS.
- Check all referrals — not just the first result.

2 Read before you escalate

- Read the referral narrative and notes, including the authorization details, provider updates, or the next step.
- For LTSS, confirm whether a referral is truly inactive or just displayed in monthly segments. Look for “monthly ongoing” in the narrative before requesting a new one.
- Compare the requested service, hours, visit limit, effective date, and provider against the current authorization.

3 Give it time

- If an authorization was just created or updated, allow at least 24 hours before treating it as a system issue.

4 If you still need to escalate

- Choose the issue type based on the action needed, not just the topic mentioned — that's what routes it to the right team.
- Include: member name and ID, benefit and service type, current info vs. requested change, and the effective or appointment date.
- Add provider or agency information when relevant, plus what troubleshooting you've already done and the outcome.
- Attach a screenshot or supporting documentation when relevant, and describe the requested resolution clearly.

5 Quick issue-type routing

Match the action needed, not just the topic:

If it's about...	Select this issue type
Referral, authorization, hours, or dates	Member Authorizations / Referral Questions
Provider, agency, or assignment	Provider: Change Request / Report a Provider Issue
Stopping a service	Cancel Service
Access, visibility, or system behavior	Report System Issue / Outage

Ready to submit?

Both forms live on the same support page — choose Member Support Form for a service exception, or Grievance Submission for a member complaint or dissatisfaction.
